Gurjan – “The toughest, The best”

Architwood products use 100% imported gurjan wood for producing face and core of plywood and 100% pine wood for filling of its block boards. Gurjan is the most unique and high density timber with natural bonding tendency and is termite and borer proof. High density in wood leads to increased load bearing capacity. Hence the core and face veneers of the Gurjan wood increases the durability of the products.

Mr. Sushil Goel

Director, Archit Plywood Pvt. Ltd.

"At **Archit Plywood Pvt. Ltd.**, we believe in going beyond the conventional and adding strong values to the present know-how. Our strong technical expertise enables us to deliver value to our renowned customers. Backed by strong knowhow, our teams deliver flawless products to customers. Our products are manufactured using latest technology which enables us to optimize the manufacturing costs. Hence we are a single point solution for customer looking to buy diverse range of products."

Architwood

Archit Plywood Pvt. Ltd. is a part of **S.K.G. Group**. The group company **S.K.G. Timber Pvt. Ltd.** has been importing timber from Africa and Malaysia for the last several years where they have good contacts with the local population.

"Architwood", a new range of branded, high quality products like plywood, block board and flush doors, has been recently launched by Archit Plywood Pvt. Ltd.. The Company and its associates have an extensive network of dedicated customers, who rely on its quality products and efficient services. The products have been well received and appreciated in the market for their quality.

Mr. Sushil Goel, the promoter of this venture has been closely associated with the plywood and timber trade industry for nearly 20 years and is a well known personality in North India. He is being assisted by his son Mr. Raghav Goel, who is an engineer from the renowned Thapar University. **Mr. Sushil Goel's belief is, "There will be no compromise on quality and our customers can be sure that we will provide them the best value for their money".**

Our Infrastructure

The company has established a state-of-the-art manufacturing facility on 10 acres of land in Gandhidham, Gujarat. The facility is equipped with the latest machinery from India and abroad and manufactures high quality plywood in 6mm, 9mm, 12mm and 19mm, Block boards and Flush doors in various thicknesses, in both MR and BWP Grades. In order to maintain its high standards, in entire supply of core and face is met by the plants in-house core and face manufacturing unit.

The factory has a special technical team to manufacture superior quality **'0' GAP BOARD** besides four seasoning chambers setup to ensure speedy and better drying. To maintain superior quality of the panels, full 2.5mm core and 100% Gurjan wood is being used for manufacturing plywood.

Our years of experience along with your dream will give birth to new furniture and interiors that you never thought were possible.

Our products:

MR Plywood (IS : 303)

BWR Plywood (IS : 303)

Marine Plywood (IS : 710)

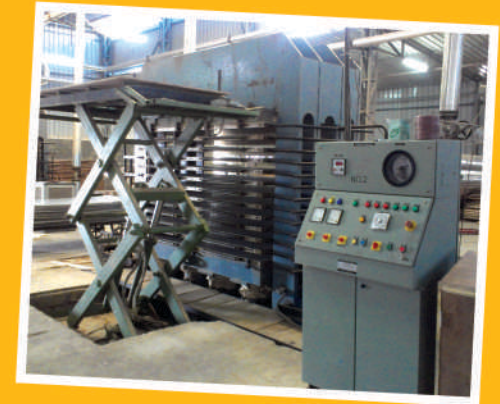

MR Block Board (IS : 1659)

BWP Block board (IS : 1659)

Flush Door (IS : 2202)

R & D

At Archit Plywood Pvt. Ltd. each and every product undergoes stringent tests at our sophisticated testing labs even as quality experts keep a close watch on the entire process. Apart from possessing state of the art production units, we have sophisticated laboratory for quality checks at various stages and an established R & D centre where we strive for improvement & innovation always.

MR Plywood (IS : 303)

Architwood MR plywood is made from 100% imported wood such as Popular from Europe, Gurjan from Burma and Eucalyptus. Bonded with Urea Melamine Formaldehyde under computer controlled temperature and pressure, they offer advantages at par with BWR grade wood panels, but at a much competitive cost. Since this ply has more number of veneers hence more strength. It is more durable and cost effective.

BWR Plywood (IS : 303)

Architwood BWR (Boiling water Resistant) Plywood is the only one of its kind to be made by pre-pressing, where each veneer is treated with preservatives prior to pressing, ensuring uniform distribution of moisture and adhesive. The unique GLP (Glue Line Protection) formula is then applied, making the plywood Termite and borer proof.

Marine Plywood (IS : 710)

Architwood marine plywood is a specially treated plywood that is designed to resist rotting in a high-moisture environment. Marine plywood is frequently used in the construction of docks, boats and other marine vessels.

Certified by the Bureau of Indian Standards, Architwood Marine plywood surpasses the required standards. It is manufactured with utmost care under the supervision of technical experts with well selected pieces of core and face veneers.

High Density Gurjan Wood with superior Phenol Bonded Resins are used to manufacture Marine Plywood. Architwood Marine ply resists all types of climatic conditions. Marine plywood is stronger and has consistent mechanical properties.

MR Block Board (IS : 1659)

Made from 100% New Zealand Pine wood and bonded with current generation of Urea Melamine Formaldehyde resin, the product is further fortified with the revolutionary GLP technology that protects it from termites and borers.

With '0' GAP superior quality, Architwood block-board is stronger than other conventional commercial block-boards.

BWP Block board (IS : 1659)

The unique feature of BWP Block Board is the New Zealand Pine filler / Batons which are uniform in dimension and are individually treated with preservative. The core and panels are made of hard species of wood while the batons are kept in a closed environment to ensure the diffusion of preservatives into the timber. The GLP technology protects it from outside too.

Flush Door (IS : 2202)

Architwood flush door is a durable product having excellent quality, exceptional finish and unique dimensional stability. It is made of selected pinewood frames and evenly sized batons. Only the finest quality of wood is used to manufacture a world class product. BWP grade of Phenol Formaldehyde resin is used for bonding the layers. Our Flush door is a perfect finish door. In-house Frame Section makes Architwood a '0' gap door. Only 'A' grade Gurjan face & core veneer of 2.5mm thickness with superior PF Resin provides long life to Architwood doors.
